Reported On	: 01-Mar-25 06:09 pm		

PARAMETER

Calprotectin - Fecal

:

Interpretation

:

RESULT VALUES

*

NORMAL VALUES

< 43.2 µg/g

METHOD

ELISA

The test is useful for detecting inflammatory bowel disease (IBD) such as ulcerative colitis and Crohn's disease

A strong positive of fecal calprotectin is likely to indicate a more significant clinical pathological condition of a patient However, a low positive of fecal calprotectin does not indicate a lesser possibility of inflammation .

A Normal fecal calprotectin level does not rule out the presence of any gastrointestinal diseases such as IBD.
